

PHASE 1 – Creating a Custom Application

Employee Raise Issue – Record Producer & Service Portal Integration

1. Objective

Create a custom ServiceNow application to support the Employee Raise Issue process. This phase establishes the application scope, name, and basic structure required for tables, modules, and later development.

2. Application Configuration

Configuration	Value
Application Name	Employee Center
Application Type / Scope	Scoped

3. Navigation & Steps

Step 1: Navigate to All menus → App Engine → ServiceNow Studio.

Step 2: Click Create and select App to create a new application.

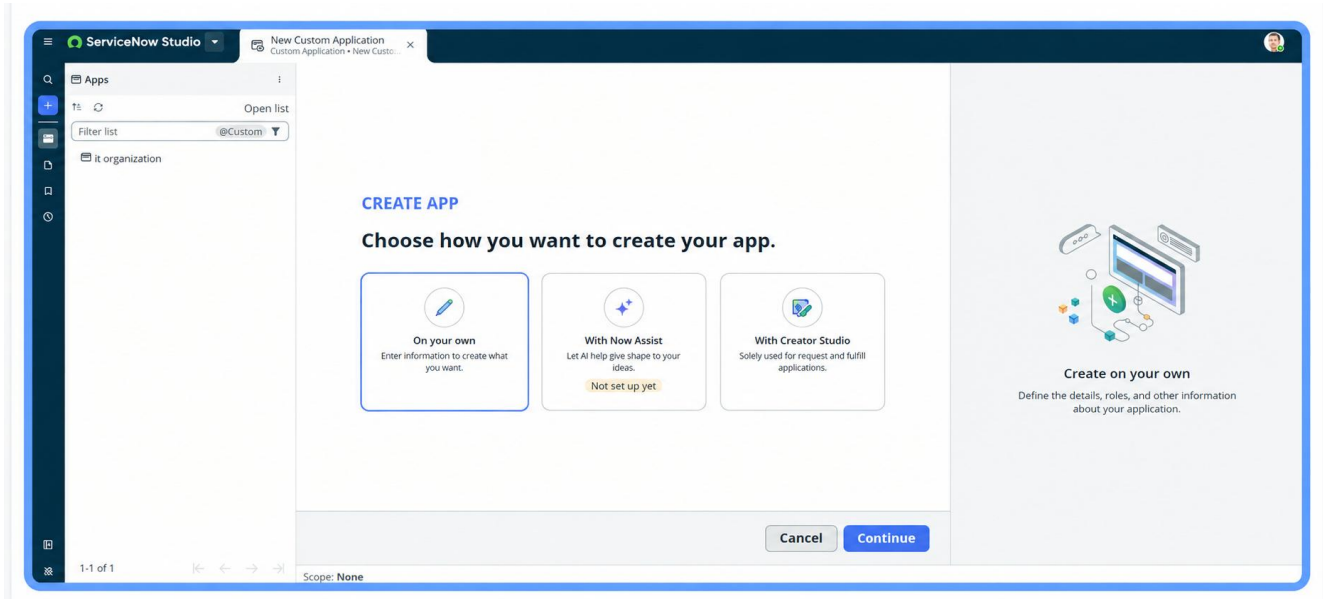

Step 3: Enter the application Name as Employee Center.

Step 4: Set Scope to Scoped.

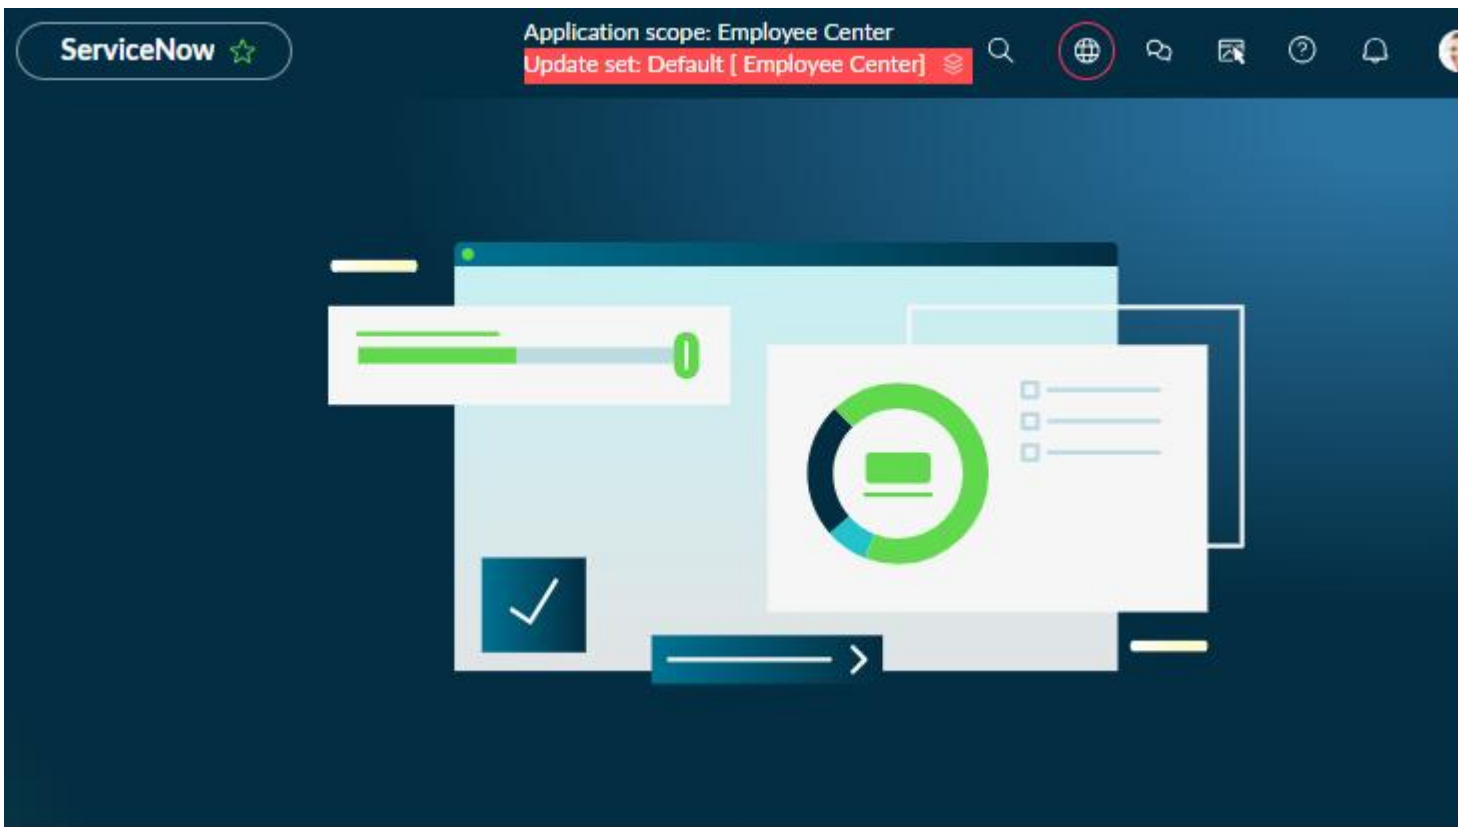

Step 5: Click Continue.

Step 6: Return to the ServiceNow home page and reload. The application should appear as the current application.

ServiceNow Studio – Create Application

Employee Center application shown as current application

4. Expected Result

The Employee Center scoped application is created and available as the current application for further development.
