

PHASE 3 – Creating UI Policies and Dependency

Employee Raise Issue – Record Producer & Service Portal Integration

1. Objective

Configure dynamic form behavior using UI Policies and create a Category → Subcategory dependency so that the form becomes easier to use and improves data accuracy.

2. UI Policy – Make Short Description Mandatory

Step 1: Go to All menus and search for UI Policies.

Step 2: Click New.

Step 3: Set Table to Employee Raise Issue.

Step 4: Set Short description to: When the state changes to new then short description is mandatory.

Step 5: Set the condition: State is New.

Step 6: Save the form.

Step 7: Under the UI Policy Action section in Related Links, click New.

Step 8: Select Field = Short description.

Step 9: Set Mandatory = True.

Step 10: Leave Visible and Read only unchanged.

Step 11: Submit and update the UI Policy.

Step 12: Open the Employee Raise Issue form, reload, change the State, and verify the mandatory behavior.

UI Policy – Short description mandatory

The screenshot shows the ServiceNow interface for creating a new record under the 'Employee raises issue' table. The header bar includes the ServiceNow logo, navigation tabs (All, Favorites, History), and a search bar. The main form area contains several input fields: 'Number' (EMP0001017), 'Requester' (with a search icon), 'Assignment Group' (with a search icon), 'State' (New), 'Subcategory' (None), 'Category' (None), 'Priority' (None), and 'Short description' (with a red asterisk indicating it is mandatory). A 'Submit' button is located at the bottom left of the form.

3. UI Policy – Make Number Read Only

Step 1: Navigate to UI Policies and click New.

Step 2: Set Table = Employee Raise Issue.

Step 3: Set Short description = Number field will read only.

Step 4: Do not apply a filter condition.

Step 5: Save the form.

Step 6: Under Related Links → UI Policy Actions, click New.

Step 7: Choose Field = Number.

Step 8: Set Read only = True.

Step 9: Leave Mandatory and Visible unchanged.

Step 10: Submit and update.

The source documentation also notes that a Dictionary Override can be used for making the Number field read only.

Number field read-only UI Policy

The screenshot shows the ServiceNow interface for creating a new record in the 'Employee raises issue' table. The header includes the ServiceNow logo, navigation tabs (All, Favorites, History), and a title bar 'Employee raises issue - Create EMP...'. The application scope is set to 'Employee Center'. The form contains several input fields: 'Number' (EMP0001013), 'Requester', 'Assignment Group', 'State' (set to '-- None --'), 'Subcategory' (set to '-- None --'), 'Category' (set to '-- None --'), 'Priority' (set to '-- None --'), and 'Short description'. A 'Submit' button is located at the bottom left of the form.

4. Creating Category → Subcategory Dependency

Step 1: Open the Employee Raise Issue table form.

Step 2: Right-click the Subcategory field and select Configure Dictionary.

Step 3: Open the Advanced view from Related Links.

Step 4: Choose the dependent field: Category.

Step 5: Under Related Links, select the Choice section.

Step 6: Enter the back end names of Category choice values for the Subcategory choices that should be displayed.

5. Dependency Mapping

Category	Subcategory
Network	VPN
Hardware	Laptop
Software	Server
Access	Forgot password

Subcategory dependent choice configuration

servicenow All Favorites History : Employee raises issue - Create EMP... Application scope: Employee Center
Update set: Default [Employee Center]

Employee raises Issue
New record

Number EMP0001013 Subcategory -- None --

Requester Requester Category -- None --

Assignment Group Assignment Group Priority -- None --

State -- None -- Short description Hardware Software Access

Submit

6. Expected Result

Short description becomes mandatory when State is New, Number is read only, and Subcategory options are displayed based on the selected Category.
