

PHASE 6 – Creating Widgets and Adding to the Page

Employee Raise Issue – Record Producer & Service Portal Integration

1. Objective

Design custom Service Portal widgets to provide easy access to the Raise Employee Issue Record Producer and display relevant employee information.

2. Left Widget – Commercial widget

Step 1: Navigate to Service Portal Configuration under Service Portals.

Step 2: Open Widget Editor.

Step 3: Click Create a new widget.

Step 4: Set Widget Name = Commercial widget.

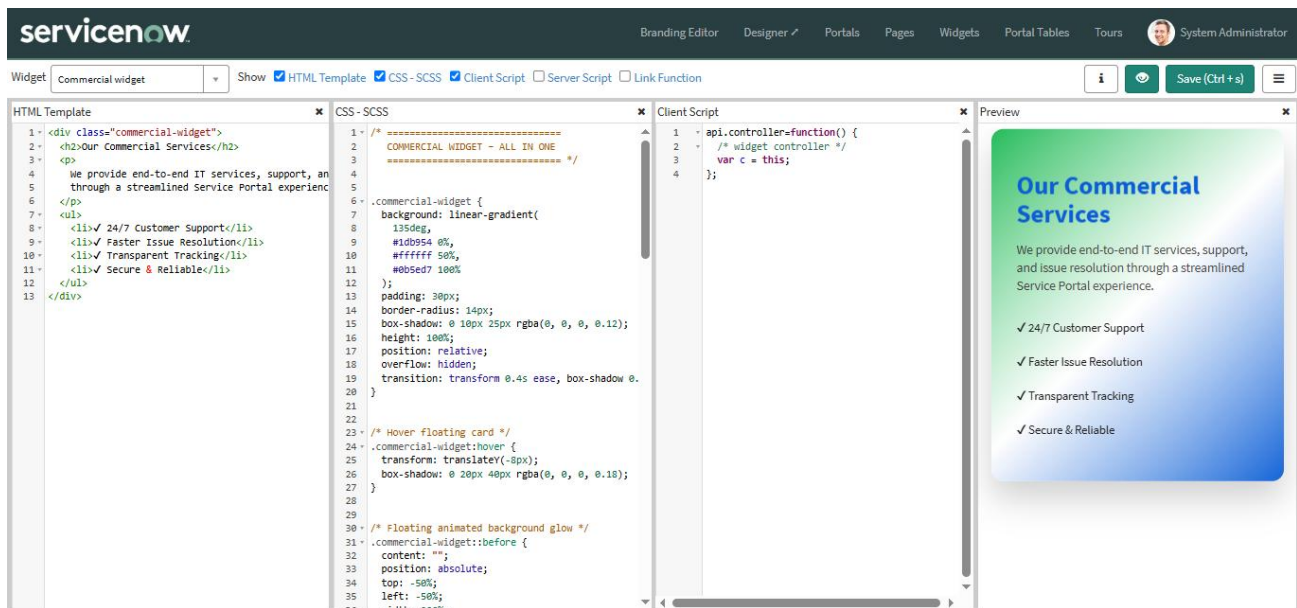

Step 5: Click Submit.

Step 6: Enable the HTML and CSS templates as required.

Step 7: Use Preview / hide with the Eye symbol when required.

The source project uses a commercial-services presentation widget with text for IT services, support, issue resolution, customer support, faster resolution, transparent tracking, and secure/reliable service.

Commercial widget in Widget Editor

3. Right Widget – Link redirect

Step 1: Open the Widget Editor and create a new widget.

Step 2: Set Widget Name = Link redirect.

Step 3: Click Submit.

Step 4: Add the HTML, CSS, and Client Script.

Step 5: Use the Client Script to redirect the user to the Record Producer using its sys_id.

Step 6: Enable the templates and use Preview when required.

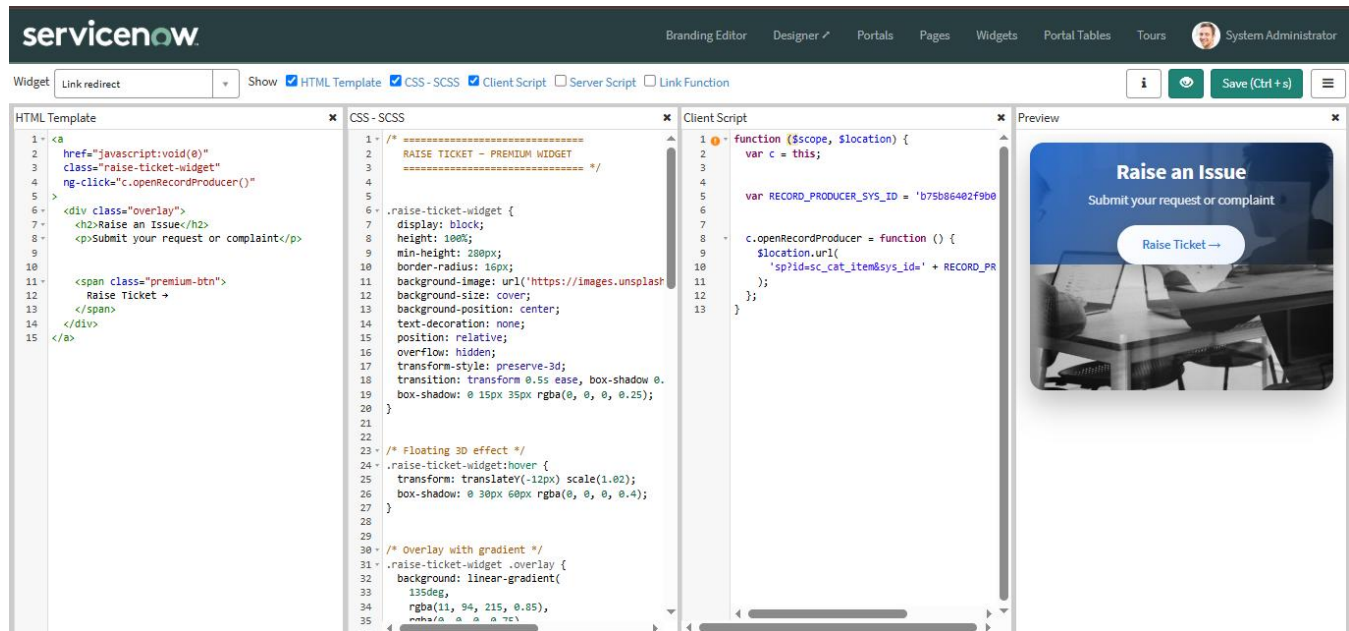

4. Widget HTML

```
<a
href="javascript:void(0)"
class="raise-ticket-widget"
ng-click="c.openRecordProducer()"
>
<div class="overlay">
  <h2>Raise an Issue</h2>
  <p>Submit your request or complaint</p>
  <span class="premium-btn">Raise Ticket →</span>
</div>
</a>
```

5. Widget CSS

Use the CSS from the source project for the Raise Ticket widget, including the background image, overlay, hover/floating effect, premium button styling, and floatGlow animation. Paste the project CSS here if you want to maintain the exact implementation.

Link redirect widget – HTML/CSS

6. Client Script

```
function ($scope, $location) {
  var c = this;
```

```
  var RECORD_PRODUCER_SYS_ID = 'PASTE_YOUR_RECORD_PRODUCER_SYS_ID_HERE';
```

```
  c.openRecordProducer = function () {
    $location.url(
      'sp?id=sc_cat_item&sys_id=' + RECORD_PRODUCER_SYS_ID
    );
  };
}
```

The source documentation specifically explains that the Record Producer sys_id must be placed in the RECORD_PRODUCER_SYS_ID string.

7. Add the Two Widgets to the Page

Step 1: Use the existing Employee Center Portal Page.

Step 2: Navigate to Service Portal Configuration → Service Portal.

Step 3: Open Designer.

Step 4: Search for the Employee Center homepage and select it.

Step 5: Create a container with 6*6.

Step 6: Search for the required widgets and drag and drop them to the desired side.

Service Portal Designer – widgets added to page

The screenshot displays the Service Portal Designer interface for configuring the 'Requesting portal'. The top navigation bar includes a back arrow, a menu icon, the title 'Service Portal Requesting portal', and action buttons: 'Try It', 'Update', 'Delete', and a vertical scroll handle. A blue notification bar at the top states: 'Please add the field 'Enable certificate based authentication' using Form Layout to enable the feature. [More Details](#)'. The main configuration area is divided into two columns. The left column contains fields for: 'Title' (set to 'Requesting portal'), 'URL suffix' (set to 'employee_request'), 'Homepage' (set to 'test_emp'), 'KB home page' (set to 'esc_knowledge_home'), 'Login page' (set to 'login'), 'Logo' (with an HP logo image and '[Update][Delete]' buttons), 'Logo Alt Text' (set to 'Requesting portal'), 'Icon' (set to 'Click to add...'), 'Quick start config' (with a toggle switch), and 'CSS variables' (with a toggle switch). The right column contains fields for: 'Application' (set to 'Employee Center'), '404 page' (set to '404'), 'Catalog home page' (set to 'esc_sc_category'), 'Catalog category home page' (empty), 'Main menu' (set to 'Employee Center Menu'), 'Theme' (set to 'Employee Center Coral Theme'), and an 'Inactive' checkbox. Each field has a search icon and a refresh icon.

8. Expected Result

The portal page displays the custom widgets, and the Raise Ticket widget redirects the employee to the Raise Employee Issue Record Producer.
