

PHASE 7 – Testing and Validation

Employee Raise Issue – Record Producer & Service Portal Integration

1. Objective

Perform end-to-end testing and validation of the Employee Raise Issue application from the end-user and administrator perspective.

2. Testing Steps

Step 1: Open a new browser tab.

Step 2: Open the project portal using the configured employee_request URL.

Step 3: Observe the image and icon added to the portal.

Step 4: Scroll down to view the created widgets.

Step 5: Move the cursor over the widgets to verify the floating behavior.

Step 6: Click the link/button to open Raise Ticket.

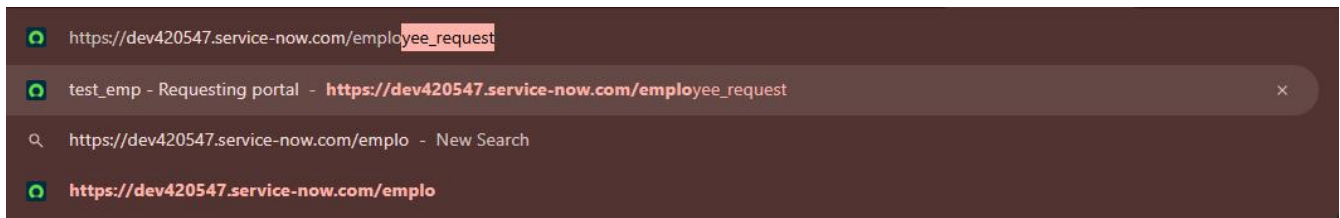

Step 7: Verify that the Record Producer opens.

Step 8: Fill in employee and issue details.

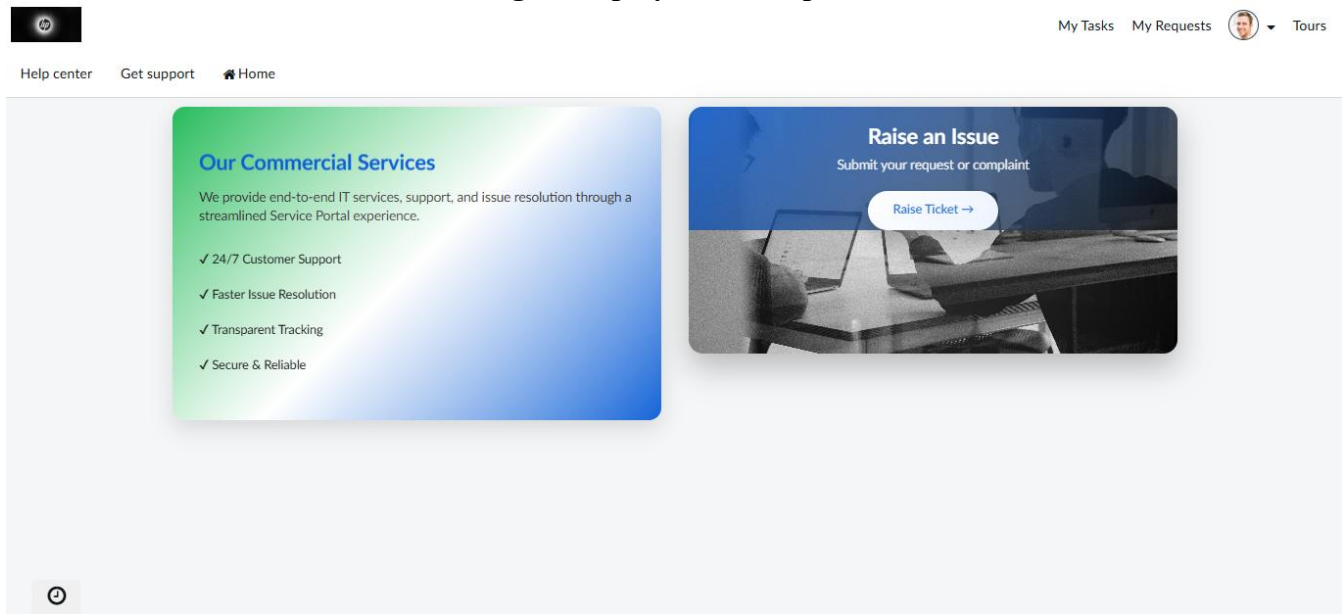

Step 9: Click Submit.

Step 10: Observe the field behavior and restrictions configured using UI Policies and Dictionary Override.

Raise Employee Issue

I am currently experiencing frequent network connectivity issues while using my office system. The network connection becomes unstable several times during working hours, causing slow internet speed, unexpected disconnections, and difficulty accessing important company resources. Due to this issue, I am unable to work efficiently and complete my assigned tasks within the expected time.
